# Author Index Volume 138 (2002)

**Abdou, M.A.,** Integral equation of mixed type and integrals of orthogonal polynomials 273–285
**Aimi, A.** and **M. Diligenti,** Hypersingular kernel integration in 3D Galerkin boundary element method 51– 72
**Aladl, U.E., A.S. Deakin** and **H. Rasmussen,** Nonreflecting boundary condition for the wave equation 309–323
**Ardanuy, R.** see **Tocino, A.** 219–241

**Bai, Z.-Z.** and **C.-L. Wang,** On the convergence of nonstationary multisplitting two-stage iteration methods for hermitian positive definite linear systems 287–296
**Barrio, R.,** Rounding error bounds for the Clenshaw and Forsythe algorithms for the evaluation of orthogonal polynomial series 185–204
**Bhuruth, M., M.K. Jain** and **A. Gopaul,** Preconditioned iterative methods for the nine-point approximation to the convection–diffusion equation 73– 92

**Chen, G.-N.** see **Li, X.-G.** 93–108
**Clavero, C.** see **Gaspar, F.J.** 21– 35

**Deakin, A.S.** see **Aladl, U.E.** 309–323
**Dehghan, M.,** Second-order schemes for a boundary value problem with Neumann's boundary conditions 173–184
**Dellnitz, M., O. Schütze** and **Q. Zheng,** Locating all the zeros of an analytic function in one complex variable 325–333
**Diligenti, M.** see **Aimi, A.** 51– 72
**Ding, X.P.** and **J.Y. Park,** A new class of generalized nonlinear implicit quasivariational inclusions with fuzzy mappings 243–257

**Gaspar, F.J., C. Clavero** and **F. Lisbona,** Some numerical experiments with multigrid methods on Shishkin meshes 21– 35
**Gopaul, A.** see **Bhuruth, M.** 73– 92
**Grossmann, C.** and **A. Noack,** Smoothing and Rothe's method for Stefan problems in enthalpy form 347–366

**He, Z.** and **J. Yu,** Periodic boundary value problem for first-order impulsive functional differential equations 205–217
**Hu, Y.-J.** see **Yang, Z.-H.** 259–272

**Jain, M.K.** see **Bhuruth, M.** 73– 92
**Jung, M., S. Nicaise** and **J. Tabka,** Some multilevel methods on graded meshes 151–171

**Lehn, J., A. Rößler** and **O. Schein,** Adaptive schemes for the numerical solution of SDEs—a comparison 297–308
**Li, X.-G., X.-J. Yu** and **G.-N. Chen,** The third-order relaxation schemes for hyperbolic conservation laws 93–108
**Lisbona, F.** see **Gaspar, F.J.** 21– 35

**Meek, D.S.** see **Walton, D.J.** 109–126
**Mohamad, S.** and **A.G. Naim,** Discrete-time analogues of integrodifferential equations modelling bidirectional neural networks 1– 20

**Naim, A.G.** see **Mohamad, S.** 1– 20
**Nicaise, S.** see **Jung, M.** 151–171
**Noack, A.** see **Grossmann, C.** 347–366

**Palacios, M.,** Kepler equation and accelerated Newton method 335–346
**Park, J.Y.** see **Ding, X.P.** 243–257
**Pu, D.** and **W. Tian,** Globally convergent inexact generalized Newton's methods for nonsmooth equations 37– 49

**Qi, L., D. Sun** and **G. Zhou,** A primal–dual algorithm for minimizing a sum of Euclidean norms 127–150

**Rasmussen, H.** see **Aladl, U.E.** 309–323
**Rößler, A.** see **Lehn, J.** 297–308

**Schein, O.** see **Lehn, J.** 297–308
**Schütze, O.** see **Dellnitz, M.** 325–333
**Sun, D.** see **Qi, L.** 127–150

PII: S0377-0427(01)00574-X

**Tabka, J.** see **Jung, M.** 151–171
**Tian, W.** see **Pu, D.** 37– 49
**Tocino, A.** and **R. Ardanuy,** Runge–Kutta methods for numerical solution of stochastic differential equations 219–241

**Walton, D.J.** and **D.S. Meek,** Planar $G^2$ transition with a fair Pythagorean hodograph quintic curve 109–126
**Wang, C.-L.** see **Bai, Z.-Z.** 287–296

**Yang, Z.-H.** and **Y.-J. Hu,** Displacement structure approach to Cauchy and Cauchy–Vandermonde matrices: inversion formulas and fast algorithms 259–272
**Yu, J.** see **He, Z.** 205–217
**Yu, X.-J.** see **Li, X.-G.** 93–108

**Zheng, Q.** see **Dellnitz, M.** 325–333
**Zhou, G.** see **Qi, L.** 127–150
